

### **Progress report for extrusion coating production unit for thermal lamination**

Creativity and innovative products offering has been the key ingredients to our success. Indopoly is consistently maintaining its status as the company of choice by suppliers and customers. Changing consumer trend towards environmentally friendly packaging products has led Indopoly to invest in new extrusion coating unit for thermal lamination film at its Suzhou, China facility. With annual capacity of 5,700 tonnes, this machine has been installed in February 2011 and ready to be commissioned in April 2011.

### **Progress report for metalizing production unit**

True to the Company's corporate strategy of horizontal diversification, Metalizing unit was installed to add new product units to the Company's portfolio. The Company appointed Applied Materials to manufacture metalizing machines with annual capacity of approximately 7,000 tonnes. The first machine has been completely installed in January 2011 and has been running commercially since early March 2011. The second unit is expected to be commissioned in September 2011.
